Dear Sir or Madam,

I am seeking a position in web development where I can contribute my expertise, support your team, and continue to grow professionally. Through my previous projects and experience, I have gained strong skills in HTML, CSS, JavaScript, Python, and React.

Currently, I work in a small team where I handle both frontend and backend tasks as well as parts of system integration. Due to limited resources, I am often responsible for multiple technical areas simultaneously. This has allowed me to develop a comprehensive understanding of various aspects of web development and related systems.

My technical experience includes:

- Migrating the e-commerce platform from Magento to Shopify
- Developing and customizing Shopify themes with Liquid, including individual widgets
- Installing and integrating Shopify apps and external tools
- Creating and customizing WordPress sites and themes
- Using the Shopify GraphQL API for data processing and integrations
- Automated image processing for marketplaces with Python scripts
- Integrating OpenAI for translations and automated workflows
- Developing internal tools, widgets, and automations with N8N

You can view an overview of my projects on my personal website.

I am particularly passionate about developing frontend applications. At the same time, I regularly work with GraphQL, SQL, API integrations, as well as e-commerce, warehouse, and product management systems. I also leverage tools like GitHub Copilot and ChatGPT to make my workflow more efficient and structured.

For my next professional step, I am looking for an environment with greater technical collaboration, clearer structures, and the opportunity to focus more intensively on frontend development. I aim to actively contribute my existing experience while further expanding my skills within a larger development team.

Yours sincerely,

Salman Khaled Ovi
