Dear Sir or Madam,

after five years in my current position, I am now seeking a new challenge in the field of web development, with the goal of further developing my professional skills and contributing my strengths in a targeted way.

In my current role, I work in a small team with a broad range of responsibilities – from frontend and backend development to system integration. This has allowed me to build a comprehensive understanding of web projects and related systems.

A key focus of my work is Shopify-based e-commerce. In this area, I have developed automation solutions that significantly reduce manual processes and costs – including solutions for processing and optimizing product data as well as preparing content for different platforms. In addition, I have implemented API-based and AI-supported processes, for example for automated multilingual website content using the OpenAI API.

From a technical perspective, I work with HTML, CSS, JavaScript, React (currently learning), and Python, as well as GraphQL, SQL, and various APIs. I am particularly interested in frontend development, which I would like to focus on more in the future.

I am looking for an environment with clear structures, professional exchange, and opportunities for growth, where I can contribute my experience and continue to develop within a team.

Yours sincerely,

Salman Khaled Ovi
